## **Contents of this WinTV-HVR-900 package**

- WinTV-HVR-900 Hybrid stick
- USB extension cable
- WinTV-Installation CD-ROM
- including the following
- WinTV application v6 with SoftPVR™ · WinTV-Scheduler
- · 7 Day EPG
- VTPlus
- This installation guide

**Options available on certain models:** 

- Audio/Video input cable
- Portable TV antenna
- IR remote control transmitter and batteries

## 1. Connecting the Aerial and A/V input cable

#### Connecting an antenna or set top box

Plug your TV antenna or RF output from your cable/satellite box into the WinTV-HVR-900's TV Connector. For digital TV reception, it is recommended to connect to a roof top aerial as this may provide a better signal quality then the portable antenna provided on some models of WinTV-HVR-900.

- You will need to ensure that you are located in a area that has Digital Terrestrial coverage.
- Please visit in the U.K.: www.dtg.org.uk/retailer/coverage.html In Finland: www.digitv.fi In Sweden: www.teracom.se In Denmark: www.digi-tv.dk In Poland: www.emitel.pl

Page 1

# 4. WinTV<sup>®</sup> application v6

### To start the WinTV application, double click on the WinTV icon.

When you run WinTV for the first time, a message will appear asking you to scan for tuner channels now; please ensure that the TV antenna is connected, click

Select your country location, for instance, select United Kingdom and then, select Scan.

The scanning process will start by scanning the analogue frequencies for channels, if any are found they will be added to the channel list. The scanning process for DVB-T will then scan for channels. When a

DVB-T channel is found, the Signal Status will show a quality level and the locked box will be checked. The DVB-T digital channels that are found will appear in the channel listing box.

# **N** ote: If you have attached an antenna and do not receive any

ote: If you do not receive channels using the portable anten-Note: If you do not receive channels acting a rooftop aerial to the device and scan again, if channels are now received there may be an issue with signal strength/quality in your area you may not be able to use the small antenna.

INTV-HVRS

#### **Connecting an external A/V source** You can also connect sources via the

A/V input cable (available on some models of WinTV-HVR-900). Plug the A/V input cable into the small connector on the side of the WinTV-HVR-900

Connect your source using either the Composite or S-Video connection and the audio mini-jack connector. ote: Unless stated, most video-

Note: Unless stated, most the Net of States and Set Top Boxes use only a Composite output via the SCART output.

## 2. Installing the WinTV-HVR-900

1. Locate a free USB 2.0 port (normally located at the side or back on the computer).

ote: Due to power and bandwidth requirements, we do not Nrecommend connecting the unit into a USB Hub.

2. Turn on your PC and wait until Windows has completely started.

3. Plug the WinTV-HVR-900 stick into the USB 2.0 port. You can use the USB extension cable (available on some models) to locate the WinTV-HVR-900 a short distance from the USB slot.

ote: If you plug the device into a different USB socket, you Nmay need to reinstall the WinTV-HVR-900 driver, but you will not need to reload any WinTV applications.

Page 2

Note: If you have any anti-virus software enabled, please disable it during the installation of the software.

When you attach the WinTV-HVR-900, the Found New Hardware Wizard will appear. Click on Cancel.

Hauppauge!

Insert your WinTV Installation **CD-ROM**, the installation window will automatically appear.

Note: If the autorun does not start, browse to the files on the disc and double click on the file called 'Setup'.

In the installation window click on Step 1: Install WinTV Drivers. A blue screen will open which will begin installing and updating the drivers for your product.

Once complete, a message appears in the bar. If this message is Drivers have been updated **Successfully**, click on the bar to exit. If the message reports an error, check the connection of your WinTV, or contact our technical support.

Page 3

### Changing channels

You can change channels by using the **Channel Up** or **Channel** Down buttons on the WinTV. You can type a channel number (for example: 27) and WinTV will tune to that channel. If the entered channel does not exist, you will see a black window.

You can also right click in the **Current TV channel box**, where you will see a list of channels. Or type letters (for example: BBC) to access to the list of the channels including these letters.

 
 TV Mode

 When you click the Full screen TV button, TV will appear full
 screen on your PC monitor. When finished watching TV full screen, click your right mouse button in the TV window. If you see video with a black box around it, click the Pref button then click TV mode tab. Check the box which says "Allow resolution change".

#### 'Alwavs on top" Mode

#### Next, click on Step 2: Install WinTV and select your language from the list. The setup window should appear and begin to automatically install the WinTV applications

Note: During the installati-on, other installation wizards may open, we recommend following the instructions in each of these and installing with the default options available

Note: For advanced users you can select the 'Custom Installation' which will allow you to modify the list of applications that are installed by default.

# Pref button

Click the **Pref button** to open the preferences menu: View: These are the settings for the On Screen Display of the TV channel and Audio Volume, where you can enable Close Captions (if supported in your system configuration), plus controls for the Toolbar mode (Title mode), NoToolbar mode (No Title) and Full Screen (TV mode)

Movies: Here is where you configure some video and audio settings. You can set the movie record directory (DVCR Record File Path). Snapshot: Set the size of your captured images, plus single or two field captures for capturing motion or still image video. Audio: Your audio settings are configured here.

### Menu Button

Click the Menu button to open the TV setup menu. Here is the main control bar for TV channels, and duplicate controls for other functions: Suite Manager: Configure the TV tuner (scanning, naming, channel pre set, etc..) and setting up favourite channel lists.

Configuration: Duplicate configuration menus for colour, audio, etc.

# View: For settings an exact TV window size: 320x240, 640x480 etc.

## Pause and Record

There are three buttons to control the watching, recording and pausing of TV. Clicking on the Pause button will cause the Pause menu to roll down from the WinTV application, while clicking on the **Record** button will cause the Record menu to roll down.

The Pause button prepares the WinTV pausing live video. The Record button will start a record session. If you click Record button more than once, a record timer will be set and the recording will be done for 15 minutes for each time the **Record button** is clicked. For example, if you click the button 3 times, the WinTV will

If you are using a Scart to composite (RCA Yellow phono) lead, please ensure that the signal is being sent in the correct direction from the Scart lead to the phono connection.

## Configuring a external source in WinTV

In the WinTV application click on Menu then Suite Manager, then click on the Sources tab. To add the S-Video or Composite channel select the option on the left and then select the Video Format from the drop down list.

Note: PAL BGHIDK is the commonly used format in Europe.

We would like to know. Would you like to scan for Tuner Channels Now

YES.

<u>Y</u>es No

🛿 🛛 digital TV channels, either use a stronger antenna (a roof top antenna is recommended for best reception) or try to add a TV channel manually (see trouble shooting section).

## Click Close when finished.

## **Pause Buffer**

The Pause buffer is space on your hard disk where video is stored during the Pause mode. The maximum amount of time which your TV program can be delayed is dependent upon how much storage space you have set for the Pause buffer.

Clicking the Pause button will start recording into WinTV's Replay Buffer. It takes about 10 seconds for the Replay Buffer to be initialized and for Pause to become effective.

Unclicking the Pause button will cause the audio/video program to start playing from the point where the button was originally pushed.

Most WinTV functions are active while in the Pause or Pause Live mode. For example, you can change volume, resize the TV window, go into "no-title mode", etc.

While in Pause mode, the Video Position bar shows the amount of the Replay Buffer which is filled with video. For example, if the Video Position indicator shows halfway, it means that half of the Replay Buffer is filled. If you find you cannot Pause as many minutes as you would like, increase the size of the Replay Buffer.

While in Pause mode, the A/V stream is always saved in the Replay Buffer. To stop saving the A/V stream in the Replay Buffer, you must exit the Pause mode by clicking **TV mode**.

While in the Pause mode, hitting the **Replay** button acts like the Instant Replay you see on TV broadcast sporting events: the audio/video goes back in time and you repeat what you have previously seen. Each click of the Replay button causes audio/video to go back 10 seconds. For example, if you want to repeat the audio/video you saw 10 seconds ago, you would click the Replay button once. If you want to see the video you saw one minute ago, you would need to click the Replay button six times.

For extended replay times, you might find it more convenient to grab the Video Position indicator control bar and move it to the left. Once you let the control bar go, audio/video starts to play (it might take a few seconds for the WinTV application to start playing).

You might have to move the Video Position indicator to the left and right to find the desired spot to start replaying audio/video.

Type in a channel "Name" e.g. Video and a Description and then click on "Save" the channel will now be added and if you click on Close you will be returned back to the main TV viewing window.

Page 6

While Replaying, your audio/video program continues to be recorded

in the Replay Buffer. Therefore, if you have clicked the Replay button 3

times (so that you are replaying the audio/video seen 30 seconds

ago), the video you see in the WinTV window will be 30 seconds

**Skip Ahead** Clicking the **Skip** button will skip the video ahead 10 seconds.

# Rewind

Clicking the Rewind button will play the Clicking the Rewind button again will continue the playing of the video.

**Fast Forward** Clicking the **Fast Foward** button one time will fast foward your video at 2X speed. Clicking the Fast Foward button two times will fast foward your video at 8X speed. Clicking the button again will continue playing back at normal speed.

**Slow Motion** Clicking the **Slow Motion** button during playback will cause the video to play in slow motion (at 1/2 speed). Clicking the Slow Motion button again will return the video to normal playback speed.

**File button** Clicking the File button opens the File menu. The last file recorded is listed in the File name box. In the File menu you can:

- Rename your recorded video file: To rename a video file, find the file you would like to rename, highlight it with your mouse, and click and hold the right mouse button. Go down to Rename and then you can type in a new name. Remember: you must keep the MPG extension on the file.
- Play a video file previously recorded: Find the file you would like to play, highlight it with your mouse (one click of the mouse button) and click Open. Then click the Play button.
- Delete recorded video files which you no longer want: Click your right mouse button on the video file once, go down the menu and click Delete.

# Pause mode

The pause mode allow you to pause the Live TV picture and allows vou to use the TimeShift function to rewind and fast forward the TV. Clicking the **Pause** button on the WinTV application starts the **Pause** mode. The Pause Menu will drop down.

Page 8

# 5. WinTV-Scheduler

WinTV-Scheduler allows you to schedule the recording of TV shows. WinTV-Scheduler, once it is set, can be closed, and the WinTV application will "wake up" at the desired time and tuned to the desired channel. WinTV-Scheduler works by using the Windows Task Scheduler to launch WinTV at the chosen time. WinTV-Scheduler sets up a command line in Task Scheduler to run WinTV, specifying a TV channel and a length of time to record.

After installation, WinTV-Scheduler can be found by going to Start / Program files / Hauppauge WinTV.

To set up an event for timed watching or recording, click on the Add Program.

The items that need to be set for each event are:

## 4. Scheduling a recording

To schedule a recording, simply click on the Program title, this will give you more information about that program, from there you can click on 'Schedule for recording', When you click a "record" button, the 7 Day EPG schedules a task to record your TV show from a DVB-T channel. The scheduled task is added to Windows Scheduled Tasks.

Note: You need to have a user name and password on your PC in order for the scheduled recordings to record through Windows Sheduled

• Source selection: leave set at WinTV to bring up the WinTV at the requested time and on the requested channel. Select Reminder to just pop-up a text file as reminder.

• Time to Begin Program: set to the desired start time. The default time is about 3 minutes from the current time. Click on the hour to set the hour, the minute to set the minute to start the program.

ote: It is always possible that your TV show will be transmit-Need in advance or late, and it takes about 10 seconds to launch the WinTV and set up for recording. Please set the Time to Begin Progam few minutes before the time your TV show should starts.

• Program Duration: set the duration of this event, using the arrows (steps of 30 minutes) or directly the keyboard. This will update the Time to End Program window.

- Date to Begin: today's date is the default. Change this if you want to schedule on another date.
- Program Period: One Time Only, Every day or Weekly are the choices. If you select the Weekly option, select the day you would have the show recorded too.
- Date to End: If you have selected the Every Day or Weekly option, you can specify the date at which it will stop this task.
- Channel selection: choose one of your scanned channels.
- Recording options: click on Record to File to record your show. Leave this button unchecked to watch TV at the requested time. You can also name your file to record.

Once these are set, click Set Program. You can add more Events, clicking Set Program after each event is set. When you are finished click Close.

Note: You cannot access the Wing settings until you have pur-chased the optional transcoder software, for more informations see www.hauppauge.com/wing. Please refer to the Wing manual for information on using the Wing settings.

The WinTV program does not have to be running for the Schedular to work, but you PC need to be turn on. If WinTV is not running, it takes about 10 seconds to start WinTV and to start the recording of TV.

Page 14

# 7. Installing the Remote Control (on some models)

The WinTV's remote control software is installed automatically during the installation of the WinTV applications. The installation will add the shortcut "AutoStart IR" to the Start-up group. If this is not the case, you can manually install the WinTV's remote control software from the installation CD-ROM / IR32 folder. Double click on IR32.exe.

1. Insert the batterie into the the **Infrared Remote control** 

2. Ensure the IR icon is on the start bar - IR.exe is loaded when Windows starts only if your WinTV is connected.

ote: If you don't see the WinTV Remote icon in the system Ntray or if you need to reset the remote control application, select "Restart IR" from the Start / All programs / Hauppauge WinTV directory. You should restart the IR program each time you plug your WinTV – except if it was plugged before Windows started.

Checking the function of the IR Remote

Make sure you see the black remote icon in the system tray (the area next to the clock in the taskbar).

Point the Remote transmitter at the Remote control receiver (the little eye on your WinTV Stick) and press the "Go" button. This should open the "WinTV Remote" menu. Press the "OK" button to start WINTV.EXE or use the "Up" and "Down" arrows on the remote to select another option

ote: The WinTV application only responds to the remote con-Ntrol if it is the active window. If the WinTV application is not the active Window, press the TV button on the remote to bring the WinTV window into the foreground.

ote: If you have a Windows Media Center PC and you do not Nhave a Media Center Remote you can use the Hauppauge Remote instead (the remote is not Media Center certified and some functionality may not be available).

**N** ote: The credit card sized remote can be stored in a laptop's PCIVICIA day while not in use

# 6. The 7 Day EPG

### What is 7 Day EPG for WinTV

Certain digital DVB-T channels, along with their TV programmes, contain a TV channel guide. This guide is a listing of the programs being shown for the next 7 days, and includes the TV programme name, programme start times and length. The 7 Day EPG for WinTV extracts TV guide data from a DVB-T channel which contains this data. It creates a database on your computer.

When the Hauppauge 7 Day EPG opens up with its chart of times and TV programs, it reads the EPG database and formats the 7 Day EPG guide window. If you would like to record one of these TV programmes listed in the 7 Day EPG for WinTV window, you simply click the "Record" button and at the correct time your TV show will be recorded on your PC.

## How to use 7 Day EPG for WinTV

give a list of options.

2. Select Open Client Tool to see the EPG Service window: It shows the status of the EPG service.

The buttons below the window give you the following controls:

- Start/stop the EPG Service · Modify the current settings
- Open the EPG help file

• Exit the EPG application

To view the EPG guide click 'View EPG' See Step 4 for more information.

EPG Service is running

Hauppauge DVB-T EPG Service 🛛 🗖 🗙

View EPG

Hauppauge!

# 3. Viewing the EPG information

From the EPG application window, click 'View EPG' this will open a web page showing the EPG information, initially the application will need to scan and update the EPG information. The amount of time it takes to read the data is related to the number of channels in your DVB-T transmission area. The more channels, the longer it takes to read all of the data, this may take several minutes:

Adresse 🙆 http://localhost/es\_home.htm

# WinTV DVB-T Electronic Program Guide

The EPG will scan 6 frequencies 2 of 6 (16% complete), Elapsed time: 00:39.

Page 16

## **Remote Control Buttons during a Recording**

**N** ote: Most WinTV functions and remote buttons are disabled when recording

Record button: Set the duration of the recording, by steps of 15 minutes up to 2 hours, then by steps of 30 minutes up to 4 hours. Clicking again will disable recording duration. This information is displayed in the Pause/Record tray.

Stop button: Stop recording and close the Pause/Record tray (as the Back/Exit button)

Pause button: Freeze the video. Press the Play or Pause button again to unfreeze the video. The Pause button has no effect on the recording itself. While the video is frozen, the recording is continued in the background, there is no Rewind, Forward, Skip, Replay function.

## Remote Control Buttons when Pausing TV or Playing a Video

**N** ote: You cannot change channels when Pausing TV

**Record button**: Stop current action and start a recording Stop button: Stop playing or Exit pause mode and close the Pause/Record tray (as the Back/Exit button)

# Troubleshooting

## To uninstall the Driver and Software

To uninstall the software simply run hcwclear.exe from the installation CD-ROM and select the last 2 options 'remove all WinTV drivers and applications (total removal)' and 'search all INF files'. If you now select **OK** a black screen will briefly appear and once it has disappeared the software will be removed. If you now re-start the computer you will be at Step 3 on page 3 of this document and can now reinstall the software.

### Only some channels are found during DVB-T channel scan

Check if there are transmitter works on your local transmitter here: www.bbc.co.uk/reception/transmitters/today.shtml as this could effect the reception of certain channel.

## Adding a TV channel manually

If the scan did not succeed, you can add a channel manually by entering the LCN number for your local transmitter. Enter your post code in this link: www.wolfbane.com/cgi-bin/tvd.exe? to be presented with information on your local transmitters.

**N**ote: Your local transmitter should be the closest transmitter with a H in the 'Pol' column. You need to write down the LCN numbers.

In the WinTV Channel Manager, click on Sources then DVB-T Source, enter the LCN numbers into the space under Channel Number and click on the **Tune** button. The channel number will then be scanned and any channels found will be listed in the channel list below.

### TV display has problems (e.g. no picture but with sound or blurred image)

With the WinTV application closed click on the WinTV program group (Start / Programs / Hauppauge WinTV) there is a utility called "Primary". Within Primary, select a different option from the main list of four items (Allow VMR/Allow Overlay/Force Primary/DIB Draw), close the application using the X in the top right hand corner then restart the TV program. Repeat this process for all four options to determine the best option for your computer.

Page 18

## "Error code 10" during installation

This is caused by a failure to load the WinTV-HVR drivers. Uninstall the software (as above) and then follow the instructions from page 3. If this still give you an error message move the WinTV-HVR-900 to a different USB port and re-install the drivers again.

## Under Windows XP Media Center application, I get the error message "Decoder Error"

This message is normally caused by missing or incorrectly installed MCE compatible DVD Decoder software. Please insure you have the latest MCE compatible DVD Decoder from one of the following recommended vendors: Cyberlink, Nvidia, Intervideo.

### Under the Media Center application I am unable to setup my TV from analogue source.

This problem occurs as the WinTV-HVR-900 does not have a built in hardware encoder which is required by MCE, you will need to install the MCE Soft Encoder from our installation CD-ROM or software download.

# << (Rewind): Swap between Title and No-Title mode

>>: Turn to Full screen TV mode

Pause button: Open the Pause/Record tray & pause live TV (pause mode). Clicking again will play from the point where the button was originally pushed

Page 19

0-9: Direct access to channel number

Text (\*): Start VTPlus teletext application (if installed)

During Pause-Mode, any key skips ahead in the Pause buffer to -2 seconds

Page 20

# Waste Electrical and Electronic Equipment (WEEE)

The device may not be disposed of with household rubbish. This appliance is labeled in accordance with European Directive 2002/96/EG concerning used electrical and electronic appliances (Waste Electrical and Electronic Equipment - WEEE). The guideline determines the framework for the return and recycling of used appliances as applicable throughout the EU. To return your used device, please use the return and collection systems available to you.

FCC Statement

## **Radio Interference Statement:**

WinTV have been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

reorient or relocate the receiving antenna.

• increase the separation between the equipment and receiver.

• connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

• consult the dealer or an experienced radio/TV technician for help. FCC ID: H90WINTV

CAUTION: Changes or modifications not expressly approved by the party responsible for compliance to the FCC Rules could void the user's authority to operate the equipment.

**CE Statement**: This equipment has been tested and complies with EN 55013, EN 55020 and IEC 801-3 part 3 standards.
